

## **ABSTRACT OF THE DISCLOSURE**

The present invention discloses alpha particle emitting,  
5 radioactive constructs capable of killing large tumors (>1mm in  
diameter), or other cells involved in human or animal diseases such  
as virus infected cells, autoimmune cells, or other pathological cells,  
including normal cells, that are targets for destruction, to achieve a  
therapeutic result. The alpha emitting constructs have high specific  
10 activity.
